Identify: 1) what the water related issue is; 2) why the water related issue is a problem; 3) how the Grantee will provide a solution to the problem (i.e. the project); and 4) what water-related benefits will result from the completion of the project.

Summary: Large wet weather events in September 2017 resulted in extended system overflows concentrated at lift station B-20, located in the South Beaches WWTF wastewater collection system. The basin has two large stations, B-19 and B-20, which struggle to keep up with peak wet weather flows such as those experienced during the September 2017 event. A hydraulic model of the force main systems was generated to analyze the dry and wet weather flows in the system, and the performance efficiency of lift stations B-19 and B-20 was evaluated. Based on the modeling and evaluation results, the installation of a ground storage tank at lift station B-20 with pumps (a master lift station) and force main improvements to the South Beaches WWTF collection system are planned to increase system resiliency and prevent sewage overflows during storm events.

Project Description

Provide a brief summary (2-4 sentences) that only details the work that will be completed and reimbursed with the grant funding provided under this Agreement. Indicate if the grant funding will result in a completed project.

Summary: Grant funding will be used for the design and construction of a ground storage tank at Lift Station B-20, new pumps, and force main improvements to the South Beaches WWTF collection system. The grant funding will result in a completed project.
